

=====

1. Fork below public repository to your account. Then clone the repository locally. Create

=====

=====

2 branches cloud\_dev01. Then add cloud\_dev02 to that repository locally and hello.txt , moto.txt and world.txt to one branch and add another 3 files to another branch. Then push cloud\_dev02 branch to the Forked repository on the remote.

=====

```
root@DESKTOP-0ANCI6F:~/project-cloud3 (cloud_dev01)# git commit -m "files are added"

=====

2. Create a remote repository merge\_conflict\_demo. Add some files in the remote master branch. Clone the repository locally. Create 2 branches locally named demo/merge and demo/conflicts. Add a merge.txt file in both branches with some data like "Hello CloudEthiX...." And "Fello CloudEthiX...." respectively and commit. Then merge demo/conflicts branch to demo/merge branch and solve the merge conflicts

=====

3. Create PR to merge the cloud\_dev02 branch to Forked repository. Approve the PR and merge cloud\_dev02 branch to master branch remotely.

=====

```
=====
```

4. Fetch latest changes from master branch of remote forked repository to local master branch. Then merge forked remote master branch with local master branch. Check If all the latest files are there. Then checkout to local cloud\_dev03 branch locally. Then Pull latest changes from the remote master branch.

```
=====
```

```
root@DESKTOP-0ANCI6F:~/project-cloud3 (cloud_dev02)# git branch -l

cloud_dev01
* cloud_dev02
master

root@DESKTOP-0ANCI6F:~/project-cloud3 (cloud_dev02)# git cheecheckout master
git: 'cheecheckout' is not a git command. See 'git --help'.
```

The most similar command is

```
checkout

root@DESKTOP-0ANCI6F:~/project-cloud3 (cloud_dev02)# git checkout master
Switched to branch 'master'

root@DESKTOP-0ANCI6F:~/project-cloud3 (master)# git pull origin master
